F A R M S

Bespoke and specialist  
Liquid fertiliser  
production

# What we do

We can offer tailored fertiliser specific to individual crop or field requirements.

Purchase your own solid material at competitive rates compared to premium liquid prices, and let us process this into a tailored liquid product.

Maximise machinery efficiency.

Benefit from the accuracy of liquids at the cost of solids.

Flexibility to add inhibitors to later applied timings.

In-season flexibility depending on crop requirements.

- Typical products that we process are;
- Ammonium Nitrate + Urea = UAN 33%N
- Ammonium Sulphate + Urea = UAS 20%N 10%So<sub>3</sub>
- Straight Urea = 20%N

Our unique service allows you to purchase the solid fertiliser, which we then process into a liquid, for you to apply at the conventional timings.

Biostimulants and trace elements can be added and applied at the same time reducing passes and cost. These mixes can be specifically tailored in small batches to suit individual circumstances if required

# Contact

- Please feel free to give us a call to discuss your requirements.
- We will also be happy to answer any questions you may have regarding the application of liquid products.
